DETAILED ACTION

1. Applicant's arguments, filed 4/12/04, with respect to the rejection(s) of claim(s) 1-14 under 35 USC 103 have been fully considered and are persuasive. Therefore, the rejection has been withdrawn. However, upon further consideration, a new ground(s) of rejection is made in view of newly find prior art.

Claim Rejections - 35 USC § 102

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

- (b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.
- 3. Claims 11 and 13 are rejected under 35 U.S.C. 102(b) as being anticipated by Saito et al (5,218,607 hereinafter "Saito").

As per claims 11 and 13, Saito teaches an image display device (Fig. 2) for storing an image and displaying the image based on a user's display operation comprising a non-volatile storage unit (col. 11, line 37) storing data which can be rewritten and maintaining stored data even if a main power supply is switched off; and display information writing unit writing display information for indicating a display state of a currently displayed image in said non-volatile storage unit if a main power supply is switched off (col. 1, lines 24-31; col. 11, lines 60-62 and col. 12, lines 12-14). Therefore, at least claims 11 and 13 are anticipated by Saito.

4. Claims 11 and 13 are rejected under 35 U.S.C. 102(b) as being anticipated by Itoh (5,453,805).

Art Unit: 2676

As per claims 11 and 13, Itoh teaches an image display device (Figs. 1 and 2) for storing an image and displaying the image based on a user's display operation comprising a non-volatile storage unit (memory 18, col. 3, lines 38-45) storing data which can be rewritten and maintaining stored data even if a main power supply is switched off; and display information writing unit writing display information for indicating a display state of a currently displayed image in said non-volatile storage unit if a main power supply is switched off (col. 1, lines 45-60). Therefore, at least claims 11 and 13 are anticipated by Itoh.

Claim Rejections - 35 USC § 102

5. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(e) the invention was described in a patent granted on an application for patent by another filed in the United States before the invention thereof by the applicant for patent, or on an international application by another who has fulfilled the requirements of paragraphs (1), (2), and (4) of section 371(c) of this title before the invention thereof by the applicant for patent.

The changes made to 35 U.S.C. 102(e) by the American Inventors Protection Act of 1999 (AIPA) and the Intellectual Property and High Technology Technical Amendments Act of 2002 do not apply when the reference is a U.S. patent resulting directly or indirectly from an international application filed before November 29, 2000. Therefore, the prior art date of the reference is determined under 35 U.S.C. 102(e) prior to the amendment by the AIPA (pre-AIPA 35 U.S.C. 102(e)).

6. Claims 11 and 13 are rejected under 35 U.S.C. 102(e) as being anticipated by Tomita (6,119,611).

Art Unit: 2676

As per claims 11 and 13, Tomita teaches an image display device (Fig. 2) for storing an image and displaying the image based on a user's display operation comprising a non-volatile storage unit (flash memory 25, col. 6, lines 21-22) storing data which can be rewritten and maintaining stored data even if a main power supply is switched off; and display information writing unit writing display information for indicating a display state of a currently displayed image in said non-volatile storage unit if a main power supply is switched off (abstract; col. 2, lines 20-51). Therefore, at least claims 11 and 13 are anticipated by Tomita.

Claim Rejections - 35 USC § 103

- 7. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
 - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 8. Claims 1-10, 12 and 14 are rejected under 35 U.S.C. 103(a) as being unpatentable over Anderson (6,137,534) in view of Saito et al (5,218,607 hereinafter "Saito").

Anderson teaches an image display device (Figs. 1 and 3) for storing an image and displaying the image based on a user's display operation comprising a non-volatile storage unit (removable memory 354) storing data which can be rewritten and maintaining stored data even if a main power supply is switched off (col. 4, lines 56-67); an image storage unit (DRAM 346) storing an image; an image display unit (LCD screen

Art Unit: 2676

402) displaying the image stored in the image storage unit; an operation detection unit detecting a user's display operation to modify a display state of the image displayed on the image display unit (col. 9, line 59 to col. 11, line 42). It is noted that Anderson fails to explicitly suggest or teach a display information writing unit writing display information for indicating a display state of a currently displayed image I the non-volatile storage unit based on a detection result of the operation detection unit. This is what Saito teaches (see abstract, col. 1, lines 24-31). It would have been obvious to one of ordinary skill in the art at the time the present invention was made to combine the teachings of Saito into the system of Anderson in order to write the displayed information (or display state information) into a non-volatile memory without lost of data even if the power is off and further to redisplay the previously stored data after the power is resumed. Therefore, at least claims 1, 2, 4, 7, 8, 10, 12 and 14 would have been obvious.

As per claim 3, Anderson teaches if the display information read from said non-volatile storage unit is not a prescribed value, said display information reading unit modifies the display information to a prescribed rating value (col. 9, lines 11-27).

As per claim 5, Anderson teaches if said operation detection unit does not detect another user's display operation during a specific time period after detecting a user's display operation, said display information writing unit writes the display information in said non-volatile storage unit (col. 11, lines 1-27 and col. 12, lines 10-15).

Art Unit: 2676

As per claim 6, Anderson teaches if display information to be written in said non-volatile storage unit is the same as a value stored in said non-volatile storage unit, said display information writing unit does not write the display information (col. 12, lines 2-6).

As per claim 9, Anderson teaches the display information includes at least one of information for specifying an original image, information about magnification of a display image and information for indicating a position in the original image of a display image (col. 6, lines 15-50).

Response to Arguments

9. Applicant's arguments with respect to claims 1-14 have been considered but are moot in view of the new ground(s) of rejection.

Conclusion

10. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Kee M Tung whose telephone number is 703-305-9660. The examiner can normally be reached on Tuesday - Friday from 5:30 am - 4:00 pm.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Matthew Bella can be reached on 703-308-6829. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
